P-H PVC 14

P-H PVC 14 corner bead for creating perfect corners when plastering in interior or exterior

Material:
- PVC

Features and benefits:
- Minimizes time required for creating perfect corners
- protects the place where plaster is the most vulnerable
- for plaster thickness of 14 mm
- for all types of plasters including gypsum-based
- long-term stability, without corrosion risk
- connecting pin for elimination of cracks at bead joints

Instructions for Use:
Before starting plastering work, use a spirit level to align the bead to the correct position. There are multiple methods to fix the profile at the corner. The bead can be fixed mechanically (with nails, clips) or fitted on mortar or a special glue. It is recommended to connect individual beads with the provided pegs. The perforation ensures connection with plaster and setting up the profile as necessary; in this way it is also possible to improve the straightness of inaccurately made corners.

Packing, Storage, Transport:
Store in a dry place in horizontal position in such a way that beads sagging is prevented.

Certification:
The product is not subject to any harmonized standard.

Technical Data:

Material	PVC
Length [mm]	2500
Arm width [mm]	43 x 43
Plaster thickness [mm]	14

Issued 01.08.2017.
The updated technical sheet supersedes the previous version. The stated dimensions of the product are nominal and may range within the allowable manufacturing tolerances.
